

# Tumble blaster cuts costs

An automated 'MM750T' tumble-blast machine from Mac'Ants is playing a key processing role for specialist brake shoe manufacturer, Saftek. The installation is said to be achieving highly consistent results – with around half the installation and running costs of the unit it replaced.

The machine's programmable control system means that it only has to be loaded and unloaded manually, allowing the operator to undertake other duties. The machine is also helping the company to meet its key manufacturing goal of zero operational down-time.

The machine features a 300mm diameter rotating drum to hold the batched components, which are processed with aluminium oxide blast media to achieve a specified surface finish prior to coating. *Tel: 01909 552500. [www.macants.co.uk](http://www.macants.co.uk)*
